

COMPOSITION

It is a special coolant used to cool the glass blocks during cutting process. It contains special hydrocarbons, surfactants, EP additives, and corrosion preventive materials.

IONIC STRUCTURE

Nonionic

APPEARANCE

Clear, colorless fluid
Flash Point : 12 °C

PROPERTIES

MEGLUB KS 63
It has perfect cooling ability.
It has high lubricity, and forms a perfect film layer between cutting blade and working glass block, thus minimizing friction and wearing
After cutting process, MEGLUB KS 63 P volatilizes. So does not cause any stain and spot formation on the glass block.

APPLICATION

It used neat form. It can be applied by brush or spraying method

STORAGE

It should be stored in its original closed package away from excessive heat and sunlight.

PACKING

In 60 kg. plastic drums; 185 kg. barrels.
