

COMPOSITION

It is a mixture of lubricity additives and organic materials of high thermal stability.

APPEARANCE

Light yellow liquid
pH(%1) : 7,5 – 8,5
Flash Point : Non flammable
Usage Concentration: 1/80 to 1/250 (According to the shape of the aluminium part)

PROPERTIES

Helps cooling the mould surface.
Durable at high temperature and pressure.
Forms a protective lubricating film on mould surface.
Does not leave residue on the mould.
Ensures a longer life span to the mould due to its anticorrosion additives.
Does not oxidate.
Inhibits discolouring of aluminium with the protective film.
Does not affect product or cause surface problems.

APPLICATION

Dilute MEGLUB MPE 6 with water at appropriate ratio. Stir and apply by spraying. The necessary concentration can be determined by testing the mould release efficiency of MEGLUB MPE 6. According to the complexity of the part, it is necessary to use higher concentration.

STORAGE

Storage life in its original closed package and under normal conditions is 1 year.

PACKING

60 or 200 kg plastic drums.
