

COMPOSITION

is a degreasing agent with a highly alkaline character, used in cleaning of oil and dirt from metal surfaces such as stainless steel, cold and hot rolled steel, aluminium, magnesium, copper, etc. It is easily soluble in hot water.

APPEARANCE

White, granular powder form.
pH(%1) : 11 - 12
Working Concentration : 30-50 g/l
Working Temperature : 70 – 85 °C

PROPERTIES

It penetrates thoroughly into the metal surface.
It breaks up and disperses the dirt, stain and oil particles.
It is easily rinseable.
It does not leave any trace on the metal surface.
It causes no abrasion on the metal surface.

APPLICATION

It can be easily applied by immersing or spraying. The activity of the bath should be controlled periodically and the necessary additions should be made.

STORAGE

Storage life in its original closed package and under normal conditions is 1 year.

PACKING

25 kg. propylene sacks.
