

COMPOSITION	Mixture of organic acid salts				
IONIC TYPE	Anionic				
APPEARANCE	Light yellow, liquid				
PROPERTIES	<p>MEGSOL PS 50 is an excellent stabilizer used in peroxide bleaching of cotton and blends. It provides whiteness by controlling deterioration of hydrogen peroxide. Does not contain silicate. Also provides a good dispersing effect together with its stabilizing effect.</p>				
APPLICATION	<p>Its application quantities are shown at the table below. In addition to the information on the table; especially, in Pad-Steam systems working with high caustic quantities and in order to increase the activity in bleaching systems by padding in the solution, 0.8-1.6 g/l of $MgCl_2 \cdot 6H_2O$ can be added. In this way, a much more active stabilization can be obtained.</p> <table><tr><td>In exhaustion bleaching</td><td>0.2-0.4 %</td></tr><tr><td>In pad-batch bleaching</td><td>7.0-10.0 g/l</td></tr></table>	In exhaustion bleaching	0.2-0.4 %	In pad-batch bleaching	7.0-10.0 g/l
In exhaustion bleaching	0.2-0.4 %				
In pad-batch bleaching	7.0-10.0 g/l				
PACKING	60 kg plastic drum and 200 kg barrel.				
STORAGE	In its original container and at room temperature is 1 year.
